## FEEDING & COLLECTING SYSTEMS

- Feeding tables dispatches the round packages in a sequence into the conveyor systems.
- Collecting tables collects packages from the conveyor systems at the end of the packaging line.
- Feeding & Collecting tables are made of stainless steel.
- The diameter of the tables can be either 980 mm or 1200 mm
- Tables have stable 3 turns / minute.

## FILLING SYSTEMS

- KULP filling machines work with volumetric piston systems.
- Filling accuracy is  $\pm 1\%$ .
- Filling ranges starting from 5ml up to 20.000 ml.
- KULP filling machines are designed to fill liquid, semi liquid, viscous and paste products with particles into the glass, plastic and tinplate packages for Food, Milk, Cosmetics, Bakery, Chemical, Pharmaceutical industries.

## CAPPING SYSTEMS

- KULP Capping systems are designed to suit the capacity of the KULP filling machines.
- KULP capping systems are designed for closing the screw caps and the twist – off caps with in the same capping machine.
- Only the cap sorting mechanism differs according to the type of caps. (Screw caps or Twist –Off caps)

## LABELLING SYSTEMS

- KULP Labellers are designed for self adhesive labels.
- KULP Labelling Systems are designed according to the easy adjustment logic for the end users.
- All the adjustments of the Labellers are done by the help of the hand wheels and the numerators.

## TRANSFERING SYSTEMS

- KULP Piston Pumps are designed for transferring paste and viscous products with particulates from production tanks to either filling machines or storage tanks.
- KULP Piston Pumps has a capacity of 2 tons / hour.

Kindly consult your Local Dealers on your area or KULP Sales Department for more detailed information and quotations about the KULP Packaging Systems that can suit your production processes.
